

Lesson 7 FAQs

Q: I've seen applications with more than one bar at the top of the window. Why does Java limit us to one menu bar?

A: Applications with multiple bars at the top of the window still only have one menu bar. The rest are called toolbars and are built differently.

Q: These menus are very plain. Are there other menu options I can implement?

A: Yes, but I didn't have room to cover more than the basics in this lesson. Sun's menu tutorial includes more ideas, such as adding icons, check boxes, and radio buttons to menu items.
