

Chapter 1: Introduction

Introduction

Welcome back to class. In the first lesson, we reviewed a lot of Java topics very briefly. I hope I gave enough detail to remind you of what you've already learned without boring you to death!

In this lesson, we're going to jump into a couple of those topics in more depth. We're going to spend some time with arrays and see how to use two different types of loops to process arrays easily and efficiently. While we're doing that, we're also going to go over how to write programs with more than one class.

With that said, let's jump into the deep water (just speaking figuratively there).
