

Chapter 5: Summary

Summary

Here's a quick activity to see how well you understood some of the concepts from Lesson 10.

Text equivalent start.

Instructions: Read each statement and decide whether it's true or false. Then read the second column to find out the correct answer.

Statement	Answer
Javas printf() accepts only one argument.	False
Every format specifier begins with a percent sign (%).	True
Java programmers can't change the content of a string.	True
In Java libraries, a field summary is a group of related classes.	False

Text equivalent stop.

Did you get them all right? If some concepts are still unfamiliar to you, you can look them up in the course index and review them.

You've made it through another lesson! Congratulations. We have only two more lessons together before the end of the course.

We've covered quite a few details about how to format our output in this lesson. We didn't get to all the possibilities for formatting, but I've given you enough for at least 90% of what most programs need to do.

We also covered quite a bit of the information that's in Java's API. I hope it makes more sense to you now. Of course, the more you use it, the more familiar and easier to use it will be.

Next time we'll look at simple graphics in Java. I'll see you in Lesson 11!
