

## Lesson 2 Assignment

For your Lesson 2 assignment, I would like you to use an array to figure out which day of the week is the best for a fictional business. Write a program to ask a user for sales information. For each sale, have the user enter the day of the week and the amount of the sale. Store total sales for each day of the week in an array, and after the last sale is entered, list the sales for each day and tell which day had the highest sales.

If you are looking for a tougher challenge, you can also store the number of sales for each day and calculate the average amount of each sale for each day of the week.
