Lesson 8 Assignment

Today, I'd like you to design a simple application of your own using the tools we've worked with in the last few lessons. Include at least one menu, an image, one of the button types we've worked with so far (JButton, JRadioButton, or JCheckBox), and perhaps a text field. Design the window and put the components into it so that it displays however you want it to. Don't worry about making the components do any real work yet. We'll concentrate on that in the next lesson. Just get it looking the way you want for this lesson.

Let me know what problems or questions you run into on this assignment. I'll see you in the Discussion Area.
