Lesson 1 Assignment

Since this is an intermediate course with lots of hands-on, in this assignment I just want to make sure you can already write, compile, and run Java programs using BlueJ or an editor of your choosing. It can be a simple HelloWorld program, using exactly this code:

```java
public class HelloWorld {

    public static void main(String[] args) {

        System.out.println("Hello, world!");

    } // End main

} // End HelloWorld
```

I just want you to go through the steps to make sure you remember how. You can use the video below as a guide on how to create and run the program in case you need a refresher.

If you need to check your Java version (on a Mac), or download the JDK (for Windows), see the Lesson Videos in the Lesson 1 Discussion area. You can use those same videos to download the BlueJ editor as well, if case you no longer have that.
